ANALYTICAL COVERAGE

ANALYTICAL FRAMEWORK

EXECUTIVE SUMMARY

A High-Converting, Profitable Business With a Retention Opportunity

100,000
TOTAL USERS

124,771
TOTAL ORDERS

79,948
ORDERING USERS

79.95%
REGISTERED-USER
PURCHASE CONVERSION

\$86.47
AVERAGE ORDER VALUE

\$10.79M
TOTAL REVENUE

51.92%
PROFIT MARGIN

9.83%
RETURN RATE

37.05%
INVENTORY
SELL-THROUGH

3.98 days
AVG. DELIVERY TIME

WHAT THE DATA SAYS

- **79.95%** of registered users have placed at least one order a strong conversion baseline.
- Revenue is broad-based: **the top 10 products drive only 1.23% of revenue.**
- Profitability (**51.92% margin**) is healthy, but varies meaningfully by category.
- Inventory sell-through (**37.05%**) and the recent revenue spike both warrant follow-up.

Repeat Customers Generate 2.5x More Revenue per Customer

REPEAT CUSTOMERS

29,851 customers

\$6,462,519 total revenue

\$216.49 avg. revenue / customer

ONE-TIME CUSTOMERS

50,097 customers

\$4,326,274 total revenue

\$86.36 avg. revenue / customer

Repeat customers are 37% of the ordering base but contribute nearly 60% of total revenue (\$6.46M of \$10.79M) retention converts directly into customer value.

Revenue Grew Steadily, With a Sharp Late-Period Divergence

Revenue climbed from roughly \$118K (Mar 2026) to \$173K (Jul 2026) consistent sequential growth. The final month, Aug 2026, jumped to \$251K, the sharpest single-month move in the dataset.

Repeat-Purchase Participation Held Near 45% Before a Recent Drop

KEY QUESTION

Is the customer base becoming more valuable through repeat behavior?

45.22%

JUL 2026 REPEAT RATE

29.78%

AUG 2026 REPEAT RATE

Answer: Yes, historically the repeat rate trended upward from ~40% (Sep 2025) to 45% (Jul 2026). Aug 2026's drop coincides with the revenue spike flagged on the previous slide and should be validated together.

Two Categories Drive Nearly a Quarter of Category Revenue

23.97%
TOP 2 CATEGORIES COMBINED SHARE

Outerwear & Coats (12.45%) and Jeans (11.52%) together drive nearly a quarter of total revenue, while the remaining 24 categories share the rest.

Implication: protect inventory availability and marketing support for these two categories as core revenue drivers.

The Top Revenue Category Is Not the Top Margin Category

Profit Margin by Category: Top 6 by Revenue (%)

Company-wide margin: 51.92%.
Outerwear & Coats leads revenue but sits mid-pack on margin (55.58%)
Suits & Sport Coats out-margins it at 59.89%.

RETURNS

12,270 of 124,771 orders returned.

Category return rates range **9.09%** - **10.81%** tightly clustered around the platform average, with no single-category outlier.

Cause not determinable from this dataset no return-reason field exists.

Search Drives 70% of Revenue but Converts Marginally Lower

No marketing-spend data exists in this dataset figures describe revenue contribution and conversion only, never ROI or CAC.

CONVERSION BY SOURCE

Display	81.16%
Organic	80.52%
Search	79.91%
Email	79.17%
Facebook	78.83%

Search drives the largest volume but converts marginally lower than every channel except Facebook.

Delivery Is Consistent Across Centers; Inventory Sell-Through Lags

DISTRIBUTION CENTER DELIVERY TIME

Range across all 10 centers: 3.96 - 4.01 days

Charleston SC	10.1% returns
Los Angeles CA	9.99% returns
Savannah GA	9.94% returns
Memphis TN	9.87% returns
Houston TX	9.83% returns

Limited differentiation in delivery speed observed across centers.
Charleston SC has the **highest return rate (10.10%)** vs. **Chicago IL's 9.65%** worth a longer observation window before concluding it's structural.

INVENTORY HEALTH

180,919 of 488,373 units sold roughly two-thirds of received inventory has not yet sold.

LARGEST UNSOLD CATEGORIES

Intimates	22,509
Jeans	21,620
Tops & Tees	20,287

Worth reviewing replenishment/markdown strategy for these categories once inventory age data is available.

What Matters Most

01

Repeat customers are worth 2.5x a one-time buyer

Evidence: \$216.49 vs. \$86.36 avg. revenue/customer

Implication: Retention is a major, quantified value lever

02

Revenue is concentrated in two categories

Evidence: Outerwear & Coats + Jeans = 23.97% of revenue

Implication: Protect availability; manage concentration risk

03

Revenue leadership ≠ margin leadership

Evidence: Top revenue category ranks 8th of 26 by margin

Implication: Weigh margin, not just revenue, in prioritization

04

Returns are broad-based, not category-specific

Evidence: Category rates cluster tightly: 9.09% - 10.81%

Implication: Investigate platform-wide, not category-targeted

05

Search dominates acquisition, converts slightly lower

Evidence: 69.63% of revenue at 79.91% conversion

Implication: Investigate traffic-quality gap on the largest channel

06

Inventory sell-through is well below half

Evidence: 37.05% sold (180,919 of 488,373 units)

Implication: Review replenishment for slow-moving categories

RECOMMENDATIONS

Prioritized Business Actions

PRIORITY	AREA	EVIDENCE	ACTION	OBJECTIVE
HIGH	Retention	Repeat customers generate 2.5x more revenue/customer	Prioritize retention & repeat-purchase campaigns	<i>Increase repeat revenue share</i>
HIGH	Category Strategy	Top 2 categories = 23.97% of revenue	Protect inventory & marketing for core categories	<i>Protect primary revenue drivers</i>
MEDIUM	Profitability	Margin varies 37.8% - 62.0% across categories	Weigh margin alongside revenue in investment calls	<i>Improve blended profit margin</i>
MEDIUM	Returns	Return rates consistent across categories (9% - 11%)	Investigate causes platform-wide, not by category	<i>Reduce return-related revenue leakage</i>
MONITOR	Marketing	Search converts marginally lower than smaller channels	Investigate traffic-quality gap on largest channel	<i>Improve conversion on largest channel</i>
MONITOR	Data Validation	Aug 2026: +45% revenue MoM, repeat rate fell sharply	Validate before use in any forward-looking narrative	<i>Ensure reporting accuracy</i>

What the Data Supports and What It Doesn't

DATA

TheLook E-commerce
(public dataset)

PLATFORM

Google BigQuery

ANALYSIS

90 business questions

DECISION LAYER

Selected high-value
outputs

CUTOFF

18 August 2026

WHAT THE DATA SUPPORTS

- ✓ Descriptive performance (revenue, orders, AOV)
- ✓ Customer behavior & segmentation
- ✓ Revenue and retention trends over time
- ✓ Category & product performance
- ✓ Profitability by category
- ✓ Return-rate patterns
- ✓ Operational comparison across centers

WHAT IT DOES NOT ESTABLISH

- ✗ Causal explanations for revenue changes
- ✗ Marketing ROI / CAC (no spend data exists)
- ✗ Reasons for product returns
- ✗ Customer satisfaction
- ✗ Competitor performance
- ✗ External market factors

Results reflect the public TheLook E-commerce dataset and query outputs available through 18 August 2026. Results may differ if the underlying dataset changes.

FROM SQL TO BUSINESS DECISIONS

Demonstrating how SQL can move beyond querying data to support structured business decision-making.
